Q. WHAT IS COVID ?

- Corona virus is a new germ around us that is making some people sick with an illness called COVID-19. People who get sick may have a cough, a fever, a sore throat or feel like they are having a hard time breathing.

1. Wash your hands.

Keeping your hands clean helps you and your family avoid getting sick and spreading germs to other people. Scrub with soapy water really well for twenty seconds — that's one verse of "Mary Had a Little Lamb," or a whole run-through of the Alphabet song.

2. No in-person play dates — for now.

The corona virus can spread from one person to another, like when we share toys or hold a friend's hand. Right now, it's safer not to have play dates with friends. You may be home from school for a while, too.

Although you can't visit your friends, you can still see each other in other ways: with your parents' permission, you can talk on the phone or over video chat. You can also stay in touch as pen pals by writing letters or postcards.

3. Masks are safe, not scary.

If you're going out in public, like to the grocery store, you may see lots of people wearing masks over their faces. Don't be scared: People are doing this as another way to help keep each other safe. The masks help protect the person wearing them from breathing in germs or, if they are sick, from spreading the germs to others.

STAY HEALTHY ,

STAY SAFE !
